

Dermatoscopic Image Classification Report

A. Dataset

The dataset comprises 2,100 dermoscopic images collected from public repositories such as the ISIC Archive. To reduce potential bias, images were sourced from multiple repositories, ensuring diversity in acquisition devices and clinical settings. The dataset was divided into three categories: Melanoma (690 images), Basal Cell Carcinoma (640 images), and Squamous Cell Carcinoma + Benign Nevi (770 images).

TABLE 1: Class Distribution in the Dataset

Class Name	Image Count
Melanoma	690
Basal Cell Carcinoma	640
SCC + Benign Lesions	770
Total	2100
